

Solid Waste Authority of Central Ohio

Automating Recycling Processes for JITRS Customers

The Just In Time Recycling program offers business paper recycling services to small businesses. ATGi was charged to develop a new system that was customer-centered, easy to use, robust, and stable.

Project Goals:

- To automate customer pick-up requests by forcing the workflow through a web application.
- To improve communications with JITRS customers.
- To improve managerial reporting.
- To centralize the JITRS database in the SWACO corporate computing center.

ATGi developed a complete functional specification based on interviews with the key project stake holders and intended users. The project was fully developed in 3 after requirements were delivered, and deployed as valuable part of the recycling program. The JITRS application continues to serve SWACO today.

Key components of the system include:

- Secure website for online data entry, compliance checking, and reporting.
- Internal application for audit and review of data.
- Managerial system for assigning and reviewing staff work.

Client:	Solid Waste Authority of Central Ohio
Services Provided:	Project Management and Planning Custom Application Development Website Hosting
